

SPECIAL SENSORS

Defect testing with special geometries

Custom sensor engineering for every geometry. Special component geometries call for special solutions. In close consultation with our customers, we design and produce customized special sensors to achieve optimum test results. The range spans from adapting existing standard sensors through to the complete new development of the sensor geometry.

Probes with angled heads can be produced matched to the corresponding geometry, for instance. Sensors for extremely narrow bores have also already been realized. Another special probe is the MECA, suitable for testing of eccentric components such as cams.

foerstergroup.com

The FOERSTER Group is represented by subsidiaries and representatives in over 60 countries worldwide. You can find a complete overview on our website.
